ABSTRACT

Indonesia has the potential for a sizeable farm with excellent products include dairy cows and beef cattle, the livestock developing superior products and are concentrated in the area of development of production centers, but not many farmers who have knowledge in the field of livestock animals, especially in this case a cow. Like the case of cattle died in large quantities in Gunung Kidul caused by liver fluke disease are not understood by the owner. This is due to the breeder less detailed recognize the symptoms of the disease in cattle identified heartworms.
