ABSTRACT

Laundry services are a business that uses a washing machine or an automatic dryer and special cleaning fluids and fragrances. Businesses are mushrooming at this time, especially the Jember district to be precise the campus area.

Ika Laundry service business servants themselves provide kilogram washing and discount washing services. The problems so far in "Ika Laundry" exist in the administration section including manual recording of notes and data collection in book form. As well as monthly and daily income reports in the business run by "Ika Laundry".

Based on the problems in this case, an application is needed that can manage monthly income reports and daily income reports in the business.
