**ABSTRACT**

*The patient's medical resume form is a summary of the entire period of patient care and treatment as has been attempted by health workers and related parties. Based on a preliminary study in March 2021, researchers obtained data information on incomplete medical resume forms, the highest incompleteness was found in the identification component, which was 86.7%, while the percentage of completeness was 13.3%, and the highest incompleteness was in the the patient's name and medical record number, the next incompleteness is in the Authentication component, which is 80%, while the percentage of completeness is 20%, and the highest incompleteness lies in the name of the doctor in charge and the date of recording the patient's medical resume form, the next incompleteness is in the report component. important is 56.7% while the percentage of completeness is 43.3%. The purpose of this study was to analyze the factors causing the incomplete filling of the patient's medical resume form. This type of research uses qualitative research, the subject of this research consists of 1 head of puskesmas, 3 inpatient doctors, and 1 medical record officer, the object of this research is to use an inpatient medical resume form to determine the factors that cause incomplete medical resume forms. hospitalization, the data collection method in this study used interviews, observation and documentation. The results found in this study are that the first priority is that there is no SOP (Standard Operational Procedure) regarding filling out medical resumes, so it is determined efforts to make SOPs for filling out medical resumes in accordance with medical record service standards.*
