A chat bot is an artificial program based on Artificial Intelligence (AI), which can simulate conversations or chats with other users like humans via messaging applications, websites, mobile applications, or by telephone. In this study, the author uses chat with a mobile application where the application made is an android-based chat bot. This application focuses on making Android chat bot mentoring, where this application can be used by mentee in terms of asking mentors. Because in the existing problem the mentor cannot reply to messages quickly to the mentee. That what makes this android chat bot mentoring application. Mentoring android chat bot has an admin that is useful for viewing user data, creating question intents, responses, and training phrases.
