

## ABSTRACT

In basic words, a platform is a medium or container that is used to run software, according to Wikipedia. Until date, the platform has been associated with technology ranging from apps to computer-related items. Platform is a programme that serves as the base for the creation of hardware and software. The term "platform" refers to the mix of hardware and software that makes up a system. This applies to applicants as well. A software can run or be operated as a result of this combination. In a nutshell, this phrase refers to a container or medium in which software may be run. What you should know is that the term "platform" is more commonly used in the realm of computing and technology. However, this word is also applicable in the corporate sphere and other professions. The goal of this study is to figure out how important digital online platforms are for students who utilize online systems during the covid-19 epidemic, as well as what elements influence students in Malaysia. The goal of this study is to find out if students want to be part in selecting numerous online learning platforms that are acceptable for Malaysian students. The sample for this study was drawn from the population using quantitative methods. Multiple regression data analysis was utilized with an online questionnaire as a data gathering strategy.

**Keywords:** *Platform, Platform Online, Platform Digital, Platform Learning*
