ABSTRACT

Registration of borrowing and repayment of medical records at Banjarsengon health center still using manual system. Still there is an obstacle that is the loan and refunds data of medical records in the period of 1x24 hours hours is not complete and, there is no description of loan and return time of medical record documents in the expedition. This research aims to design and create information system for loans and refunds the medical records by using waterfall method at Puskesmas Banjarengon. This research was conducted in Banjarsengon healt center. The data collection methods used are interviews, observations and documentation. The result of this research is the design and creation of a loan information system for the return of medical record documents using waterfall method. The advantages of this information system is the existence of a warning alert on the poly information system can be a reminder system of medical record documents borrowing by poly can facilitate filing officers.
