## **ABSTRACT**

*Public health center is a health care facility that organizes public health efforts and first-level individual health efforts. Banjarsengon public health center is one of the health agencies that deals with patient care and treatment. The pharmacy section of the Banjarsengon Health Center in carrying out registration, recording medical records, drug data collection and managing reports is still done manually. In addition, data collection errors are often encountered which can lead to errors in reporting. The purpose of this research is to solve problems in drug data collection by designing a pharmacy information system that is capable of dealing with drug administration problems at the Banjarsengon health center pharmacy. Making a pharmacy information system application using Microsoft Visual Studio 2019. The results of this study are a pharmacy information system to carry out automatic reporting and drug data collection that can simplify patient care and the reporting process*
