ABSTRACT

VCT (Voluntary Counseling and Testing) is a program for prevention, care, support, and treatment of HIV/AIDS. Kencong is a sub-district with the most cases of HIV/AIDS. From 265 cases, 45 people died because of HIV/AIDS. The number of VCT visits from 2015 to 2017 decreased quite drastically, from 329, 193, to 119 with a total of 35 HIV +. As a result, VCT targets cannot be used to improve future programs so that they can reduce to eliminate new HIV infections and reduce it to negates death. This study aims to evaluate the implementation of the HIV/AIDS VCT program at Kencong Health Center, Jember Regency. This type of research uses qualitative and for data collection method uses interviews, observation, and documentation. The results of the study show that the input factor for VCT implementation is human resources are still lacking and some people not attended training, funds are sufficient, facilities and infrastructure aren't good enough, and Standard Operational Procedures for VCT implementation already exist. Factors prcess is organizing of overlapped division tasks, the implementation of pre-test counseling and test results have all been carried out. The output factor is HIV didn't reach the target, 68% pregnant for women patients, 67% for TB patients, 50% for risk factor patients, and 30% for STI patients with 100% each target. The results of this study obtained priority problems is not all VCT officers attended the training. An alternative solution is to recommend officers who haven't attended management case training to Administrative officers who are proposed by Puskesmas leaders.
