ABSTRACT

Web testing with the First Click Testing method aims to improve the navigation and layout of web pages with a focus on the first user click. This method involves testing the user's first click on a specified web page. The author has conducted research with the title Application Design Using the First Click Testing Method on the Bondowoso Mushroom Partner Website to ensure that the website, especially the Bondowoso Mushroom Partner, functions properly, meets the requirements, and provides a good user experience. Blackbox Testing test results obtained that the system can run well. The results of the system accuracy test were 100% of the respondents where 10 mushroom partners and 15 students, especially the informatics engineering study program, Jember State Polytechnic campus. The results of the User Acceptance Testing (UAT) test obtained 91% of 10 respondents and have been validated by experts.
