ABSTRACT

With rapid technological advances, it is very possible to create newthings in the computerized world, where everything and anything always involves computers in the application of information technology in the company to cover various management functions. The company's data management focuses mainly on financial data management, which requires an information system used in processing data and transactions to provide the necessary users to plan, control, and operate the business. like at Tjinta Bondowoso Store.

Tjinta shop is a shop that engages in leather crafts, which are crafts that use leather as a raw material. The leather used is leather that has been tanned,

rawhide or synthetic leather. For convenience in transactions and work in managing finances, an information system is made that aims to provide solutions to several problems, such as recording employee data, goods, sales transactions, recap of employee salary data, recap of goods data, and recap of sales transaction data, which is still done manually.

Keywords : *financial information system, store sales transactions*
