**ABSTRACT**

*A study program is a series of courses or curriculum that focuses on a particular area of knowledge and is offered by an educational institution, such as a university or college. Each study program has the goal of providing in-depth understanding, skills and specific knowledge in that field to the students who take it. Grade 12 students tend to be confused about choosing a study program that matches their abilities and grades. This study describes the prospects for grade 12 students to continue on to tertiary institutions after completing secondary education. This research focuses on several factors that influence students' decisions in choosing to continue their studies, such as academic interests. This research uses the Multifactor Evaluation Process (MFEP) method and is website-based*
