

What is Open Access?  
Open Access is an initiative that aims to make scientific research freely available to all. To date our community has made over 100 million downloads. It's based on principles of collaboration, unobstructed discovery, and, most importantly, scientific progression. As PhD students, we found it difficult to access the research we needed, so we decided to create a new Open Access publisher that levels the playing field for scientists across the world. How? By making research easy to access, and puts the academic needs of the researchers before the business interests of publishers.

Our Authors and Editors  
We are a community of more than 103,000 authors and editors from 3,291 institutions spanning 160 countries, including Nobel Prize winners and some of the world's most-cited researchers. Publishing on IntechOpen allows authors to earn citations and find new collaborators, meaning more people see your work not only from your own field of study, but from other related fields too.

The gourd family is one of the most important edible plant families in the world. However, the planting and cultivation of gourd crops are affected by both biological and abiotic stresses. This book presents the latest research on the biological and abiotic stress in *Cucurbitaceae* crops. It is organized into four sections on “Introduction of *Cucurbitaceae* Crops”, “Biological Stress i...
