ABSTRACT

This study aims to design educational media in the form of a single page website that contains material on balanced nutrition which is expected to increase knowledge and prevent nutritional problems in junior high school students. The method used in this study is the Research and Development (R&D) method. This method applies the stages of the ADDIE model (Analyze, Design, Development, Implementation, Evaluation). The results of the implementation of the material expert validation test results obtained a percentage of 95% and media experts by 95% using a Likert scale calculation and is included in the very good category, doesn't need revision then it is feasible to use in terms of material and design aspects. The results of the evaluation of the acceptance test assessment obtained a percentage of 91% using a Likert scale calculation, which is classified as very good without the need for revision and is feasible to use.
