**ABSTRACT**

Sri Rejeki Sewing Course (LKP), located in Perum Kalirejo block E-25 Dringu Probolinggo, was established on December 12, 2000. This institution provides facilities for self-paced sewing lessons, enabling cost-effective clothing production and fostering creativity. Additionally, LKP Sri Rejeki serves as a place for internship students and individuals from the community interested in learning sewing. However, LKP Sri Rejeki faces challenges in selecting clothing materials due to the abundance of stores in Probolinggo City. Therefore, the use of a decision support system with the Simple Additive Weighting (SAW) method is expected to assist the owner of LKP Sri Rejeki in determining the best material suppliers from various stores.
