ABSTRACT

The mosque has a stewardship organization like takmir mosques and mosque youth . Their task is to organize all the needs dinaunginya concerned with the mosque , one of them set financial budget of the mosque in order to facilitate the funding if the reports perekapan will hold an activity and doing development. Many mosques that I met are still complaining about data loss when asked for accountability in the financial flow of the mosque. Nurul Huda Mosque for example , there is often a misunderstanding between Takmir mosque with the surrounding community . And so we need an information system that can help the takmir in terms of financial accountability of existing workflow . System recommendations were made using methods Prototyping , Prototyping Method is a method which has the characteristic of listening to customers, so there is no less invalidated data due to miss communication between the customer and the designer. The experiment was conducted using prototyping methodology . The system used for design review tools Power Designer to review Namely Unified Modelling Language (UML) , Use Case Diagram , Activity Diagram , Sequence Diagram and Class Diagram . In Preparation System used tools Adobe Dreamweaver Namely And XAMPP WITH PHP programming language.

Keywords: Prototyping, Unified Modelling Language
