

ABSTRACT

Daniar Ekki Prasetyowati, Program Studi Manajemen Informatika, Jurusan Teknologi Informasi, Politeknik Negeri Jember, Tahun 2016, **“Sistem Informasi Pendataan Poin Pelanggaran Siswa Berbasis SMS Gateway pada SMP Negeri 7 Jember”** (Data Collection Information Systems Student Violation Points Based SMS Gateway at SMP Negeri 7 Jember), Surateno, S.Kom,M.Kom (Dosen Pembimbing I) dan Moh. Munih Dian.W, S.Kom, MT (Dosen Pembimbing II).

Logging information systems student violation points based SMS gateway is an information system to manage data collection points breach students of SMP Negeri 7 Jember regularly and informing parents to more easily and quickly . With this system , the time required for the recording of violation points very quickly and efficiently . Because the data is already stored in the database and will be executed automatically by the system without copying the data from the general ledger (case) again . Just enough input the name and the infraction , then the number of points the offense has appeared by itself without seeking the points of the breach. So the data is more secure , because only teachers Counseling can be entered into the system.

This system can be used as a medium of service to parents in monitoring the development of children in school , because students who commit violations will incur additional points by teachers Counseling . The report is recorded in the system and stored in a database . The system also provides output in the form of non-academic student assessment report (personality) that is included with the distribution of report cards each semester to facilitate the process of reporting to parents.
