Applications can also be interpreted as a software unit created to serve the needs will be several activities such as pernigaan systems, community services, advertising, or all of the processes performed almost human.

From the survey potential test of academic tend to still manually, using paper is generally done in writing and it looks complicated and Makes it possible to pupils / students who work on the problems the landfill does not comply with the limitations specified time, sometimes even though the limit workmanship matter has been exhausted and expected to stop work on the problems but the students still do the problems to supervisors act to take the answer sheets. Therefore made "Academic Potential Test applications based on Visual Basic .NET" to facilitate the participants to work on the problems the landfill by the time that has been given and can know the value that is obtained after working on the landfill matter directly and can not be contained in the works by the time cheating supervisors so that the test can run as what is desired.
