

ABSTRACT

Rabbits are now no less competitive with other pets as seen from the wider community have a lot to maintain ornamental rabbits and rabbit decoration in question is to be made in other domesticated pets like rabbits do not like beef or consumption. In today's existing technology development where it has mushroomed in the community that is the presence of technology android, android here is an existing operating system on a mobile device that has similarities with the operating system on a computer device that is extremely useful for finding data or manage data from a mobile phone, and of course very practical in use in all places, by because the report is made by entering a few diseases that are often encountered by masarakat who would like to keep rabbits so as to create an expert system that is included in a mobile phone that has a android operating system with java programming language so that people can easily access or seek the truth about the disease of rabbits without the need to consult an expert.
