***ABSTRACT***

Decision support system called DSS is a system that helps to determine the alternative of calculation of the criteria in accordance with existing data. With symptoms of the symptoms that occur can be overcome by using the DSS.

Fertilizer is essential in helping to grow healthy a fertilizer plant because of the presence of the necessary elements of a plant can be met and an element that does not exist on the land needed by plants can be met with this fertilizer. Citrus fruit plants need a fertilizer because it can help accelerate the growth of plants in itself and can maximize or stabilize crop. By using the Analytic Hierarchy Process (AHP) system can take into account the appropriate fertilizer required by the plant so that the plant citrus fruit citrus fruit can be stable and makimal crops.
