ABSTRACT

The Public Health physical facilities must meet the safety and health requirements of providing security, comfort, safety and health protection and ease of service to all. Efforts to meet safety and health requirements by designing the room with due regard to work environment factors. The purpose of this research is to design ergonomic work unit of medical record unit at Panti Public Health. Techniques Data collection using interviews, observation and brainstorming. Spatial design using space design application is sweet home 3D. Ergonomic structuring of the workspace of the medical record unit is tailored to the working system components that include workflow, equipment and work equipment and the workplace physical environment. So that effort can be done to design workspace of medical record unit by using ergonomic principle in terms of physical environment such as lighting, ventilation, humidity and temperature in order to create an effective, safe and comfortable room. With the design of the workspace of the medical record unit it is necessary to add the officer in accordance with the division of duties in the medical record unit.
