ABSTRACT

School Operational Assistance (BOS) is a government program which is basically the provision of funding for non-personnel operating costs basic education as the executor of compulsory education. In supporting the management of school operational funds (BOS) school school, then created an information system that can help in the management of BOS funds. Information Systems Management School Operation Support Funds was made because of lack of knowledge treasurer on how to generate the report effectively and efficiently, workmanship administration BOS funds are not using the system-related or interconnected that uses excel in data processing, and is not supported by the management of good data, so preparing reports BOS funds still not up in SD Islam NU 07 causing less timely report. Thus was made the information system is to support so that the data be accurate and complete and financial statements can also be timely and intertwined about the data K 1 and K2 as well as their E-office to be under construction with funds Bos anywhere that facilitate the execution of funds BOS.

This application is built using the programming language Visual Basic (VB) and SQL Server database. Data flow and design of this system using Data Flow Diagrams (DFD), the development method used is the Waterfall Model. Given these applications can assist in facilitating the management of school operational funds (BOS) in Islamic Primary School NU 07. So the financial statements dihasilkan memiliki data is accurate and complete and be on time.

Keywords: BOS, E-office, Database, Visual Basic, SQL Server.
