Medical Record Study Program

Health Department

## ***ABSTRACT***

*Kalisat Regional Hospital implements medical medical record management support. The medical record document is not secure and confidential, where many other medical officers enter the filing room, there are officers eating and drinking in the filing room, storage is still open, and officers or research students leak the contents of the patient's medical record. The purpose of this research is to know determinant safety and secrecy of medical record documents at the Kalisat Regional Hospital. The type of research in this study is qualitative research using brainstorming methods with interview, observation, and documentation. The results obtained in this study were officers characteristics of the highest education level of high school officials, 32-38 years old officers, and male sex. Psychological factors include attitudes such as officers still eating and drinking, other medical officers in and out, opening medical record documents without permission and there are leaks in the contents of medical record documents. Motivation factor include officers feels satisfied and competitive at work. Organizational factors include awards in the form of praise and leadership not giving a replacement medical record document missing. The result of brainstorming that become the main cause are the low level of education of officers. The advice provide includes advanced education or training, giving regular evaluation and charter to officers.*
