ABSTRACT

Aplikasi Pengolahan Data Nilai Siswa SMK Negeri Darul Ulum Banyuwangi Berbasis Web is for implementation an informations system of score computer based that can be rely so can create information and report faster, accurate and relevant with needs.

Source and type of data that used obtainable via study field and study literature. There are with observation and interview to objek of it and with match literatures. And for analysis method of data used is method of qualitative's deskriptive. From product it have I do, to be found troubles from system have a walk. There are: lateness report and information, opten happen mistake of product, difficult looking for manual data, over times work as result from jumbles process and reapeded, etc. A condition that make me to create an informations system executeness of score and to be hope it can be handling and anticipate problems.
