ABSTRACT

Based on a preliminary study conducted at the "DokterKu" inpatient clinic it is known that there is a double duty on the officers, some officers are less friendly and the number of visits decreases by 2230 patients to 2077 patients. This leads to a decrease in income at the clinic. The purpose of this study is the relationship of patient satisfaction with the interest of re-visit at "DokterKu" inpatient clinic of taman gading. The type of research is analytical research. The sampling technique was an incidental sampling with a sample of 96 patients. Based on the result of analysis of patient satisfaction relation with interest re-visit, there was a significant correlation between satisfaction with re-visit interest of sig (0.000) and correlation coefficient value of 0,578 which in value of patient satisfaction relation with interest of re-visit very strong.

Keywords: Relationship, Patient Satisfaction, Interest of Visit
