ABSTRACT

Information technology is one technology that is growing rapidly at this time. With advances in information technology, access to available data or information can take place quickly, efficiently and accurately. One example of information technology is the navigation system. However, at present there is little or no information system utilizing GPS technology for emergency service reporting at government agencies such as BPBD (Regional Disaster Management Agency) of Jember. Therefore, here the authors propose to help users and BPBD of Jember District in facilitating reporting during emergencies quickly and accurately.

Keywords : *GPS, Emergency Service.*
