ABSTRACT

Early medic and nursing assessment form towars emergency patient must be based on the needs and the condition which the result of the assessment is to understand the need of medical service and nursing service therefore service and treatment can be started. Urgent form that has been existed has not qualified to acreditation standard of the hospital with 2012 version for early medic and nursing assessment, so that the gotten information is not maximal. The aim of this research is to re-design urgent forms in Balung Jember Hospital 2016. The data collection method are observation, interview and brainstorming. The result of this research is viewed from physical aspect of early medic and nursing assessment using white paper in size of A4 80 gram (21 x 29.7cm) in potrait lay out. Based on anatomy aspect, the heading of early medic and nursing assessment form is to put logo, the name and the full address of the instance, the introduction which should be appropriate with the aim of the form that are early medic and nursing assessment. Based on the content aspect of the early medic assessment form, the additional data consits of a kind of triage, the date of arrival and handling, the ealy survey of ABCD, painful scale, medicine allergic, fungtional status, fall down risk. Based on the nursing assessment form, it consists of patient's identity, primary survey, secondary survey, nursing diagnose, act plan, self nurse-act, collaboration act, nursing evaluation, further action, given tasks and nirse autentication. Hopefully, the researcher's suggestion related to the result of early medic and nursing assessment form design can be applied in RSD Balung Jember.
