### **ABSTRACT**

*Kampoeng Batja Reading Park is one of the libraries are located at Jalan Nusa Indah alley 6 no. 7 Jember . First built in 1983 by Mr. Iman Suligi , one retired teacher SMK Negeri 3 Jember . These libraries have ± 3,500 collection of books ranging from story books for children up to the book to the public.*

*Currently , Kampoeng Batja Jember still use manual processes in managing data the reading park . For example the data book , visitors , borrowing , and the return . Libraries still write the data in a book , whether it is in the master data and transaction recording . It is less efficient considering that Kampoeng Batja Jember have quite a lot of visitors so it will take a lot of time to serve the people who want to do the borrowing and repayment.*

*Therefore , the solution offered is to create a " System Information of Kampoeng Batja Reading Park Jember " . With this system , it is expected that the officer will be easier and faster to enter the data , such as master data or transaction data . Not only that , the system is expected to assist in the making of the report to be more computerized and the results are accurate . In addition , this system is also expected to assist visitors in finding books , so visitors no longer have a hard time finding the book you want is borrowed . Reading Garden Information System will be designed to use desktop -based programming language will then be developed with the software Microsoft Visual Studio and SQL Server .*

*Keywords: Information Systems, Reading Park, Library*
