ABSTRACT

As technology started a revival by many societies particularly Indonesia, AR starts to be implemented within the scope of application of Augmented Reality (AR) can include the world of entertainment, education, arts, navigation, visualization, manufacturing, health and the military. Utilization technology of Augmented Reality already began many developed for world education as a learning tool. One of the examples in the media application is learning how to perform ablution for prayers and children. At the time of now learning to use media is already more interesting book again for kids who've often using electronic tools, even the kids who are still aged 3 years already understand how to use a smartphone. By giving the media learning that also use the smartphone will attract interest from kids to learn. For example learning how to use the application with prayers and ablutions, expected children interested to learn how prayer and ablution are already using media technology smartphone and using the technology of Augmented Reality.
