## *ABSTRACT*

*This study focuses on the implementation of Digipay Satu as a digital payment
system for government procurement of goods and services at the Office of State
Treasury Service (KPPN) Jember, which serves as the Regional State General
Treasurer (BUN). The background of this study is based on the government's efforts
to promote digital transformation in state financial management in order to
enhance efficiency, transparency, and accountability. This study employs a
qualitative approach using a case study method. The results indicate that the
implementation of Digipay Satu at KPPN Jember has been carried out in a gradual
and structured manner in accordance with applicable regulations. Supporting
factors include the existence of clear regulations, policy support, and the active role
of KPPN Jember in conducting socialization and assistance. Meanwhile, inhibiting
factors include limited digital literacy of human resources, the readiness of vendor
administration, and resistance to system changes. The efforts made by KPPN
Jember to overcome these obstacles include socialization, technical assistance, and
continuous coordination with work units and goods and service providers. The
implementation of Digipay Satu as an effort to improve the efficiency of state
financial management at KPPN Jember is demonstrated through increased
efficiency in terms of time, costs, transparency, and accountability of financial
transactions. Therefore, Digipay Satu contributes to the realization of more
modern, effective, and efficient state financial management.*
