ABSTRACT

The purpose of this research is to know the influence of 10% fermented banana leaves' flour on rations toward the broiler performance. The instruments used in this research are *DOC strain cobb*, commercial feedstuffs, yellow corns, smooth milled rice and bran, residues of coconut, residues of soybean, fish flour, *Top Milk*, and fermented banana leaves' flour. The data analysis used in this research is Test t between *P0* (broilers without fermented banana leaves' flour) and *P1* (broilers fed by 10% of fermented banana leaves' flour). The result of this research shows that using 10% of fermented banana leaves' flour on broiler's rations is not significant toward the increasing of broiler's weight and rations conversion. In conclusion, using 10% of fermented banana leaves' flour on rations does not influence the performance of broilers.

Keywords: Broiler, Fermented banana leaves.
