***ABSTRACT***

*This study aims to analyze partnerships in achieving the Sustainable Development Goals (SDGs) in Arjasa Village, Arjasa District, Jember Regency, particularly Goal 17 concerning partnerships for village development. The research method used is descriptive qualitative with data collection conducted through documentation study of the Arjasa Village Medium-Term Development Plan (RPJM Desa) 2019–2024 and Village SDGs data. The data analysis techniques include data reduction, data display, and conclusion drawing. The results show that partnership practices have been implemented through strengthening village capital access and knowledge transfer through collaboration with financial institutions and universities. However, the integration and reporting of partnerships within the Village SDGs system have not been optimally documented, resulting in partnership indicators that have not been fully reflected.*
