ABSTRAK

This research is motivated by the high number of early marriage cases in Jember Regency, especially in Silo District, and the lack of educational media that is attractive and appropriate to the characteristics of MTs Muqoddimatul Akhlaq Silo students. This study aims to develop educational media in the form of learning videos about the risks of early marriage. The research method used is Research and Development (RnD) with the 4D model, namely Define, Design, and Develop. Data collection was carried out through interviews, observations, and questionnaires, then analyzed descriptively quantitatively and qualitatively using a Likert scale. The results showed that the learning video media obtained validation from material experts of 70.6% and media experts of 78.6% with the category "Feasible". Small-scale trials obtained a percentage of 81.6%, while large-scale trials obtained a percentage of 82.12%, so the media was declared feasible and acceptable to students. The conclusion of this study is that learning video media about the risks of early marriage is suitable for use as educational media. Students are advised to use this media to increase their understanding, awareness, and ability to make wiser decisions.
