***ABSTRACT***

*Indonesia has an important role in the agricultural sector in increasing national economic growth. So that the selection of the right rice seeds is very important to be able to increase productivity in farming and national economic growth. However, there are still many farmers in Indonesia who are still confused in determining superior rice seeds in their production activities. Therefore, here the author will build a decision support system for the selection of superior rice seeds which will provide information and options for farmers in choosing seeds, especially for superior seeds. The system is built using a method that is Analytical Hierarchy Process (AHP). This method is expected to help provide answers to the results of the best seed recommendations for farmers.*
