ABSTRAK

Eko Candra Cahyana, Department of Information Management, Department of Information Technology, Polytechnic of Jember, 12 September 2014 "Boutique Web-Based Information System (Case Studies in Boutique Sumber Makmur District of Wuluhan)".

Is a clothing boutique shopping are provided for someone who is looking for clothes. In the boutique there are many models of clothes available. From the general to the specific. From cheap to expensive.
Boutique in Sub Wuluhan, Boutique Sumber Makmur provide clothes that have been mentioned above. But the difference boutique Sumber Makmur with some other boutique that is, there is a website that contains information about items in the boutique.

Sumber Makmur Boutique website has several features that can be used by visitors. Just as the "porch" which contains information about the website. The next menu is "about us" that contains the profile owner of the shop. Menu "way of shopping" is also available, so visitors easily in the shop at this website. The next menu is the "contact us" and "site map products".

All the features that are likely to help the visitors to see the information to process the booking is available on the website. So that someone who wants to buy a product shop prosperous source no longer need to visit the place and it all can minimize time and costs.
