ABSTRACT

Geographic information system is a system that made the graphic into the map , one of the geographic information system Jember accident-prone areas . The increasing number of accidents in the district muddy caused by many factors such as the lack of information received by the public against accident -prone daerah located in Jember district which raises the potential for an increase in the number of accidents , with the geographic information system accident-prone areas can assist the Traffic Police at muddy to provide information on the accident-prone areas . Jember itself has not had a geographic information system that is made in the form of a graphical map using google maps map . Application of geographic information system can display every road accident data on each of the main line. With the data that has been determined by the Traffic Police Jember
