ABSTRACT

The library is facilities provided by the school to meet the needs of students will be given the lack of learning materials in teaching and learning activities. However, current activities on at the library is not simple anymore, these activities are divided into several items that include services, processing, and procurement of library materials such as: recommendation of the student book, student book donation. provision of research, extension to users, as well as the procurement of books. With this information system in the Pahlawan high school library

Procurement is a core activity of several units in the library. Because the collection of a library or library materials are resources that must be managed in the library.

With the library information system to minimize time and easier data management, especially in the Pahlawan high school library then made a WEB based library information system, in order to facilitate all the activities of the library without having to come directly to the library.

Keywords: Library, Procurement
