ABSTRACT

Web-based information system has important role, it is able to influence the whole process. As the analysis result in Puskesmas Puger, the data information of posyandu is written in book by bidan. It can makes difficulties because book has limited store and inefficient to recall the data. That condition can be easier if the Puskesmas Puger has posyandu web-based information systems. So the aim of this research is to give a brief of web-based information system as a information media, analyze the source of the information system problem, then build compatible web-based information system for Puskesmas Puger. These aims will help Puskesmas Puger to process the patient's data accurately, produce data report easily then minimalize operational cost of archives room.
