**ABSTRACT**

*In conducting business, a primary co-operative has a very large turnover, ie the tens and even hundreds of millions of dollars. Products sold any goods to reach thousands of products. Warehouse officer requires information systems that can facilitate the management of inventory in the warehouse and also to predict the number of purchases of goods to the supplier. It required Single Moving Average forecasting methods that can be used to guide the warehouse personnel to order the goods to the supplier.*

*Expected with the implementation of the Single Moving Average on inventory control information system is to assist and facilitate cooperative officers to carry out their tasks more effectively.*

*Keywords : Inventory Control, Cooperative, Single Moving Average*
