ABSTRACT

National Land Agency is a government agency in Indonesia which has the task of carrying on the government in the field of land use in national, regional, and sectoral. While in Measurement Survey and Mapping Section itself has the task, among others, perform project management of the national registry, make entry in the register file form a national project, and perform management and development of technical equipment and information technology.

Looking at the volume of data that is managed from a national survey project (PRONA), and data processing are still using paper microsoft excel makes this performance is ineffective and inefficient. Until the data processing takes quite a long time to resolve because the data includes many run.

activities legalization of assets commonly referred to PRONA, is an acronym for National Operations Project Agraria. PRONA is one form of legalization of assets and activities in truth is a process in land administration covering; adjudication, land registration until the publication title deed / mark evidence on land rights and maintain them in bulk.
