ABSTRACT

Feed is one of the main factors that determine the success of chicken rearing. Feed costs represent about 70% of the costs of raising broilers. The aim of this reasearch was to know the efectivity of feed restriction on the feed eficiency and to know the best precentation of the feed restriction in broiler. The treatment thet give was adlibitum, 100% feed giving, 90%, and 80% feed giving. The feed restriction can make a better feed eficiency.

Keywords: *Broiler, Feed Efficiency, Feed Restriction.*
