ABSTRACT

The analysis is the decomposition of a complete information system into component parts with the purpose to identify and evaluate the problems, opportunities, constraints that occur on the needs of what is expected to be in proposing the amendments. The hospital is a health care units of the health system and is a strategic element in view of the context of the amount of expenses that is issued, where the majority of funds in the health sector absorbed weakly layperson, both in developed countries and in developing countries.
