ABSTRACT

This information system spread of HIV/ AIDS in East Java can help Health Departmentin socializing how the spread of the disease has been exist at every area in East Java.Almost every year, we will find the new sufferer from this disease at every area. Human Immunodeficiency Virus (HIV) or Acquired Immunodeficiency Syndrome (AIDS) is one of the most dangerous diseases in the world since there is still no cure for it and the society's knowledge about it is still low. This disease has spread quickly in both low and high society. Therefore, this information system can be used to facilitate the Health Department in socializing HIV/ AIDS and the spread of this disease in East Java.
