ABSTRACT

Informed consent is a complete explanation of medical or dental action addresed to pastients or their closest relations to obtain consent to be carried on patients. Based on preliminary research in RSUD dr.R. Soedarsono Kota Pasuruan there is incomplete filling informed consent form in operating room in January there are 53 forms which 43 incomplete filling forms, in February there are 52 forms which 43 incomplete filling forms and in March there are 53 forms which 38 incomplete filling forms. An incomplete filling informed consent maybe involved in legal action if there is a commit according to medical mistake from the patient's family. This research aims to analyzed and arranged efforts to solved the problem of incomplete filling informed consent used brainstorming. This type of the research used qualitative and data collection used interviews, observation, documentation, questionnaires, and brainstorming. Based on the result and explanation of individual factors which contained knowledge and work experience was the staff with high knowlwdge and had work experience more than a year, psychology factors was the lack of the doctor who filled the informed consent and socialization had not been carried out evenly to the staffs related to completeness of informed consent, organization factors is there was no punishment and reward for fill the informed consent and there was no jobdesc for the surgeon and the result of efforts to improve recommendations for incompleteness in filling informed consent in operating room was reminding the doctors at every meeting, asked the result of socialization related informed consent to the staffs who attended the socialization, the management departement immediately rebuked the doctor, knew the calculation of how much the completeness informed consent from each doctor, medical committee make surgeon jobdesc.
