ABSTRACT

Ebizz Hotel is one of room rental service company. It is a new hotel located on Jalan Kalimantan Jember which is growing and keep on developing service and quality standard from every side. At this moment, Jember EBizz Lodging Company is one of the companies that are still using the manual method in conducting an inventory of their goods. Recording assets goods carried in inventory book list. Many technical obstacles that arise when there is a need to look at the inventory of a particular item such as a search process that takes a long time, archival paper that is damaged, the writing is clear and the other is not so. In connection with the above, to provide alternative methods of inventory goods more easily, quickly and efficiently, then made an application design goods inventory at the Company's web-based E-Bizz Lodging Jember which refers to electronic data pengelolahan. This application is made in such a way so as to facilitate the user, in this case the inventory officers also assist the agency in making decisions which are beneficial to the Company E-Bizz Lodging Jember..
